Renewable Exchange celebrates 8th year anniversary and the move into new Bristol HQ on 29th of August

Renewable Exchange is celebrating its 8th anniversary on 29th of August in new office location at Thomas Court, Thomas Lane, Bristol. Founded in 2016, Renewable Exchange launched the industry leading online power purchase agreement (PPA) platform in 2018. The platform grew with an extra-ordinary pace, connecting thousands of renewable energy generators with energy buyers in only 6 years. The company started its international expansion in 2023 and opened its German office in Mainz last year.

“We are excited to announce the move of Renewable Exchange. This move is a strategic decision that will allow us to better serve our customers and expand our reach in the market. When we launched the Renewable Exchange Platform back in 2018, we were the first online PPA platform in the world. Today we are the largest PPA platform in Europe by numbers of generators and sites registered on the platform, and the number of PPAs executed. We look forward to welcoming our clients and business partners to our new location and with our new office our growth will only accelerate”
said Robert Ogden, founder and CEO.

Renewable Exchange connects renewable energy generators and buyers to ensure a transparent and data-driven PPA tender process. The innovative digital PPA marketplace enables generators of any size to fully optimise and sell their electricity. Over the last eight years, the innovative idea has become a solid platform serving thousands of generators. The platform won the REA Innovation Award in 2019.

About Renewable Exchange: The Renewable Exchange PPA platform is the largest online marketplace connecting buyers and sellers of renewable energy - with over 2,200 PPAs signed to date in the UK and Germany. The platform supports both operational assets and projects under development to enable generators of any size to optimise the sale of their electricity, through a transparent and efficient PPA tender process combined with a suite of market insights. <https://renewable.exchange/>
