

# The Renewable Exchange

# PPA Platform

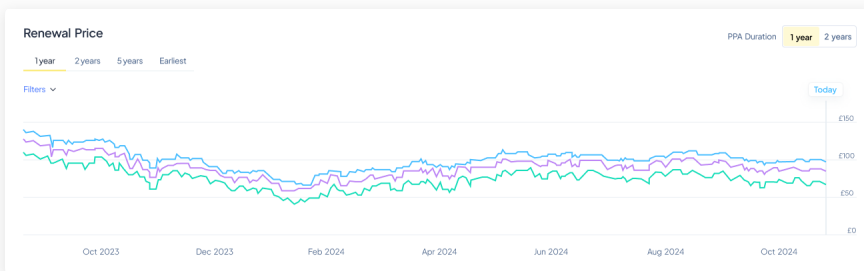

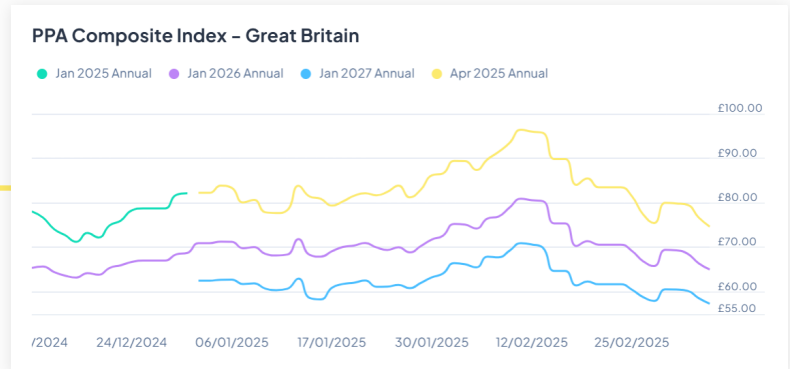

Our platform enables you to optimise your renewable asset revenue. Here's a quick look at some of the main platform features for renewable power generators.

## Monitor

## Power market insights

Power price data brought into a central dashboard, including the Renewable Exchange PPA composite index, driven by our extensive database of renewable assets, and calibrated by thousands of real PPA bids.

## Forecast

**Daily PPA forecasts, bespoke to your asset or portfolio**

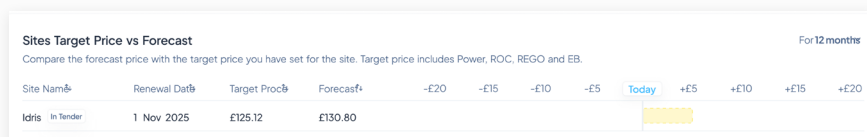

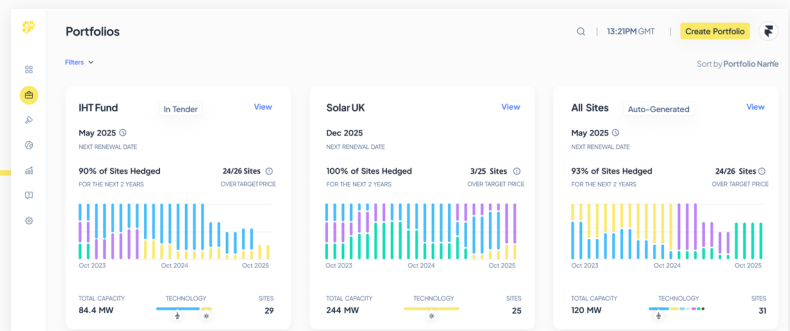

We take into account technology type, region, embedded benefits, green certificates and more to estimate the price you will receive for your power, typically accurate to within 4%.

**NEW**

## Customise

## Portfolio-level management & user permissions

Group assets into portfolios to simplify PPA forecasting, tendering and reporting. User permissions allow multiple colleagues to view and manage PPAs. Send-to-sign supports easy contract signing with counterparts without platform access.

## Track

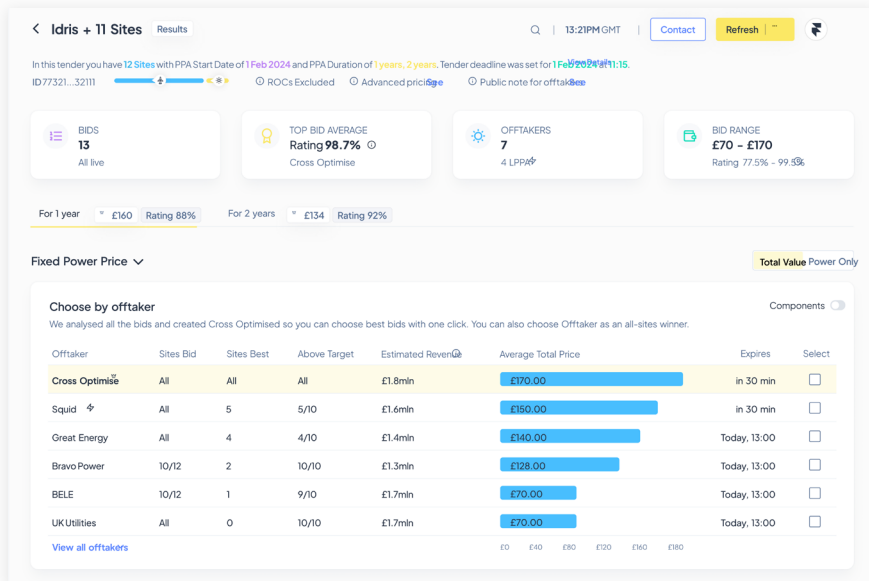

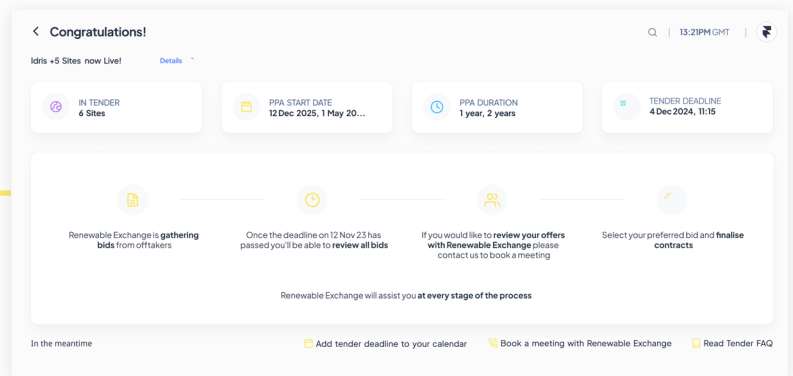

### Automated alerts when your PPA forecast price reaches your target price

Set a target PPA price and the platform will let you know when to tender your assets, so you never miss market peaks.

## Tender

### Receive competitive bids from the whole market

Backed by a team of experts who ensure the bidding process is seamless and communicate with you through every stage of the tender process.

## Review

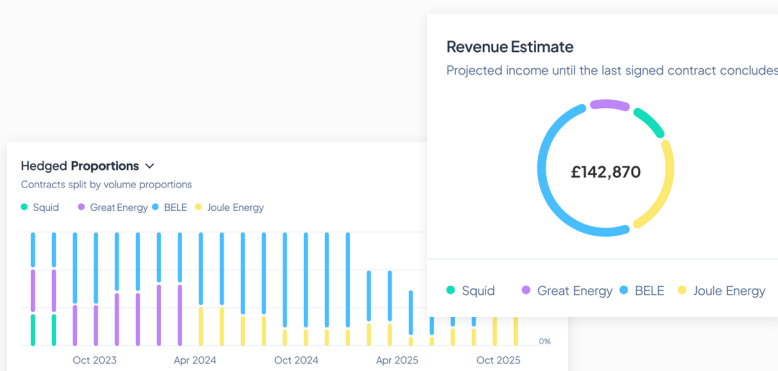

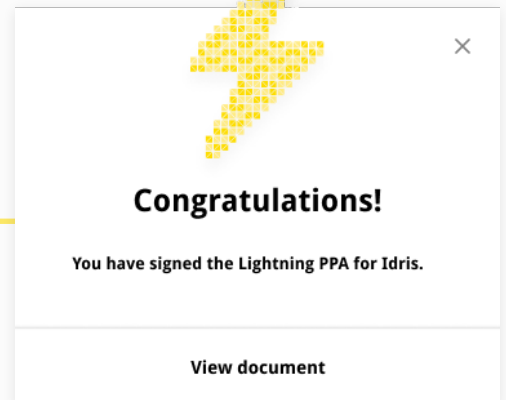

### Enhanced bid analytics

Compare bids with complete transparency, taking into account all embedded benefits and costs. Cross Optimise allows you to instantly select the top bids across your portfolio of assets.

## Contract

### Execute contracts in a flash with Lightning PPA

Over 69% of our PPAs are now signed through **Lightning PPA**; one-click, standardised contract execution to capture market prices while reducing legal review times.

## Report

### Monitor revenues, exports, and risk exposure

Pull reports on export levels, revenue estimates, hedged proportions, concentration risk and more.

# Explore the platform

Let us show you around the platform by booking a demo with the Renewable Exchange team [HERE](#)
